

# Installation Manual

macOS

# 1. Installation

Download the macOS software installer from the Engl Amps homepage and open the downloaded .dmg file in your download folder.

Move the Engl Cabloader icon into the applications folder as shown in the window below.

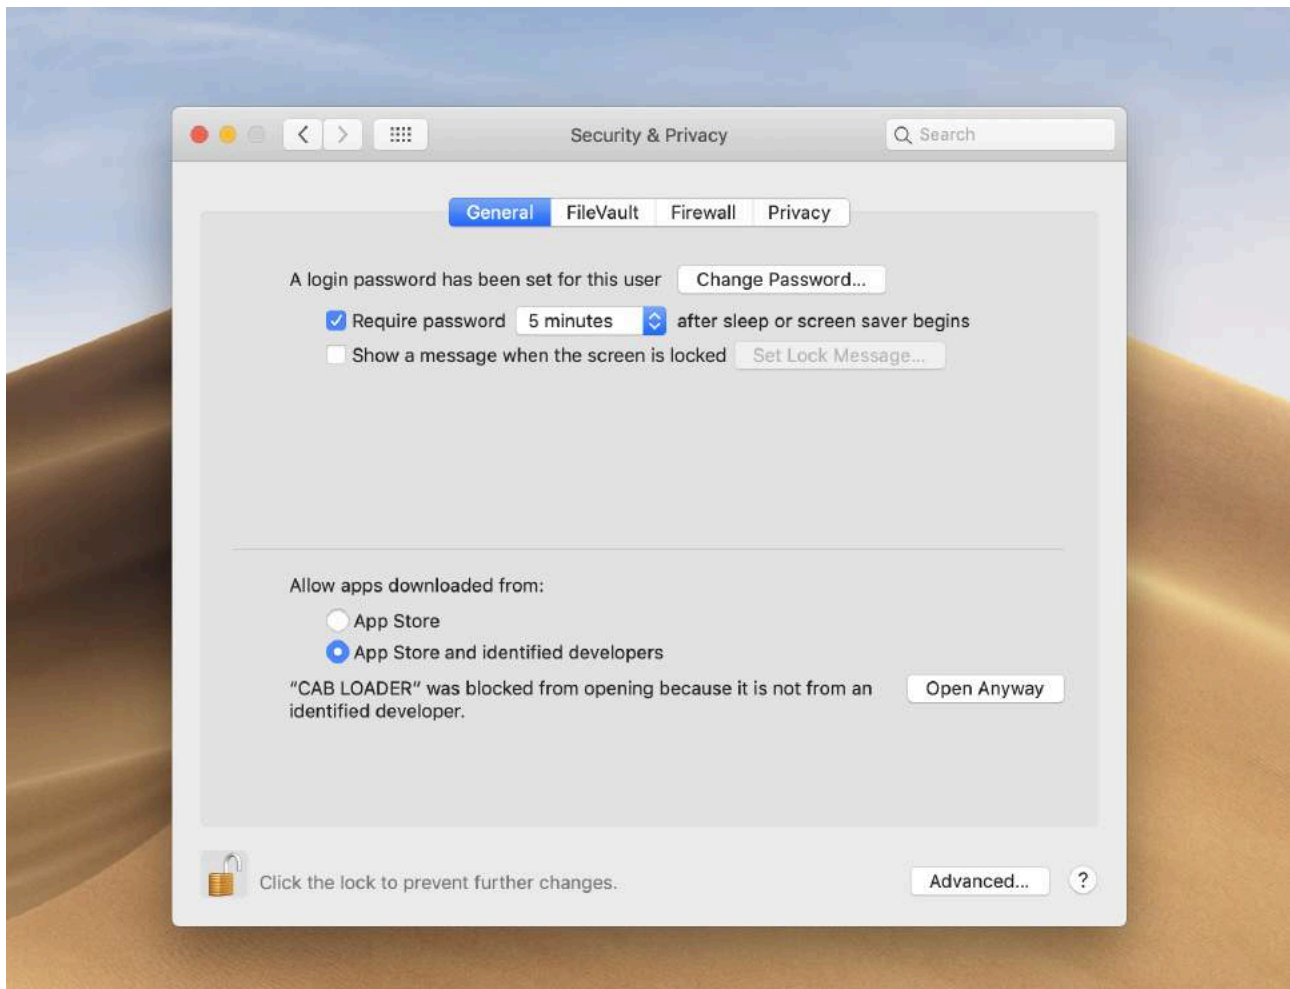

The installation is finished after the file is copied in the applications folder which should not take longer than a few seconds.

## 2. First launch

Before you launch the Cabloader software always make sure that your Cabloader pedal is attached to your computer with an USB cable.

Upon launching the Cabloader application the first time you might receive an error message stating that the application can't be opened because it is from an unidentified developer.

If you see this message, click on the "OK" button and open the macOS System Preferences. Navigate to the Security & Privacy pane. Click the lock in the bottom left corner and enter your password.

Next click the "Open Anyway" button next to the passage mentioning the Cabloader application. Your Cabloader software should open now and macOS will refrain from blocking it in the future.

### 3. Uninstall

If you ever want to uninstall the Engl Cabloader software simply navigate to your applications folder and drag the Engl Cabloader icon into the trash.
