

Power Tap Pro 8

Operator's Manual

INTRODUCTION

The **Power Tap Pro 8** is a professional power supply designed to provide clean, reliable power for guitar and bass effect pedals. Its ultra-low noise circuitry delivers studio-quality performance, eliminating unwanted hum and interference in both recording and live environments.

All outputs are fully isolated to prevent ground loops and cross-noise between pedals. In addition to standard pedal outputs, the **Power Tap Pro 8** features a **high-current 12V / 2A output** ideal for modeling processors and power-hungry digital devices. For flexible pedalboard setups, the unit provides multiple current options: **one 500 mA output, one 300 mA output, and five 100 mA outputs** - allowing safe operation of analog and digital pedals simultaneously. Built-in short-circuit and overload protection ensure dependable operation at all times.

Its compact, pedalboard-friendly enclosure makes the **Power Tap Pro 8** a perfect solution for home studios, rehearsals, live performances, and touring use.

FEATURES

- Ultra-low noise design for clean, studio-quality tone
- Fully isolated outputs to eliminate ground loops and interference
- 1 x 12V / 2A high-current output for modeling processors and digital units
- 1 x 9V / 500 mA output
- 1 x 9V / 300 mA output
- 5 x 9V / 100 mA outputs for analog pedals
- Short-circuit and overload protection
- Compact, pedalboard-friendly enclosure
- Ideal for studio, rehearsal, live performance, and touring use

Each output has an individual LED indicator — the LED lights up when a pedal is connected and turns off automatically if a fault or overload is detected.
